THESIS - VOL. 25.

MANIA A PATU

Observations
on
Mania a Patu.

by

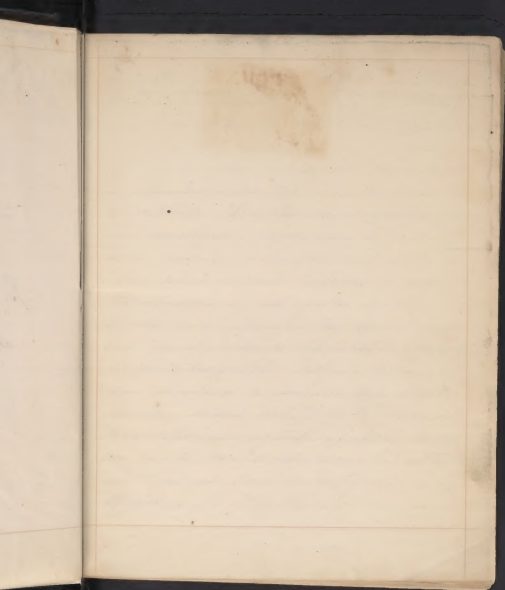

J. M. Stoughton -

admitted March 9th 1821

St. Maria a Spelle

The faculty by which man is elevated above the creations around him is intellect. By this he is qualified for the investigation, defence and diffusion of truth, and for those pure and rational pleasures which beguile the sorrow and augment the pleasures of his transient existence. To cherish and strengthen his mental powers and direct them to the noblest pursuits is his indispensable duty. Against whatever may tend to diminish and degrade them he ought sedulously to guard, and more especially against whatever may conduce to confound, invert and obliterate all that is dear and dignified in his species.

observation
the results

The causes which induce that pitiable condition, denominated Mania, are numerous. - They have often been traced, and are sufficiently known. One of these, less frequently referred to, but not less injurious than the rest, it is the design of the following pages to exhibit.

Drunkenness is an evil of frequent occurrence - The many diseases to which the inebriate is liable form a considerable part of the train of misfortunes following the practice of the vice. It is to this it is to be ascribed a disease than which, none is more formidable in its nature, or in its consequences more terrible: Inferior to Mania a potu.

I have called the subsequent pages observations - and what I here offer has been the result of personal observation.

expresses

We have no very good histories of this disease. It is presumed to be caused by the immoderate use of ardent spirits - Perhaps the reason why European writers have so much neglected this disease, may be, that in England, where small liquors are generally used, and in the South of the Continent, where each province drinks its own *Vin du pays*, this disease is but little known. It is true that Holland, Germany, Westphalia and other Northern nations are troubled with this disease - From their Physicians we have had valuable tracts, abounding in rich practical precepts. It is to be regretted that, in our own country, but little attention has been paid to the subject. Some important papers have been given to the public, but yet much remains to be investigated.

The name Mercurialis a Potu expresses but partially the cause of the

The most of the human
 nature is to be the stomach. This material
 in itself is generally affected. After
 death the stomach of a man killed by
 poison can be almost inflated with
 thick black water. Sometimes it is
 with a small amount of air. The fact the stomach
 is very sensitive to the action of
 the air is to be seen in the stomach of a
 man who has been killed by a
 small amount of air.

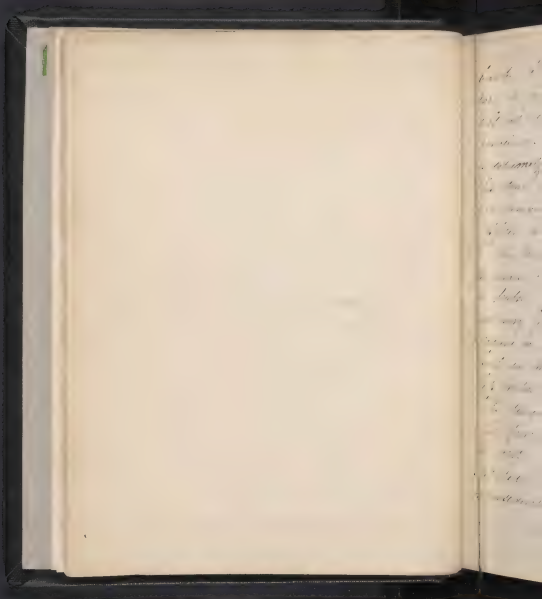

the first step is to get a
list of names of all the
people who are interested in
the project. This is a very
important step, because it
helps to determine the scope
of the project. It also helps
to identify the people who
will be responsible for the
different parts of the project.
Once you have a list of names,
you should try to get in touch
with them. This can be done
by mail, by phone, or by
visiting them in person.

When you get in touch with
the people on your list, you
should try to get as much
information as you can about
their interests. This will help
you to determine the scope
of the project. It will also
help you to identify the people
who will be responsible for
the different parts of the project.
Once you have this information,
you should try to get the
people on your list to agree
to work on the project. This
can be done by asking them
to sign a statement of intent.
This statement should say that
they are interested in the
project and that they will
work on it. Once you have
this statement, you should
try to get the people on your
list to meet and discuss the
project. This will help you to
determine the scope of the
project and to identify the
people who will be responsible
for the different parts of the
project.

the settlement of the nation to
which the highest is held was made.
The laws which relate to the medical attendance
in a settlement are not very numerous. The
law which relates to the medical attendance in a
settlement is to give the physician a right
of attending upon the settlement. The law which
relates to the medical attendance in a settlement
is to give the physician a right of attending upon
the settlement. The law which relates to the
medical attendance in a settlement is to give the
physician a right of attending upon the settlement.
The law which relates to the medical attendance
in a settlement is to give the physician a right
of attending upon the settlement. The law which
relates to the medical attendance in a settlement
is to give the physician a right of attending upon
the settlement. The law which relates to the
medical attendance in a settlement is to give the
physician a right of attending upon the settlement.

The law of the settlement is to give the
physician a right of attending upon the
settlement. The law which relates to the
medical attendance in a settlement is to give the
physician a right of attending upon the settlement.

the river that in winter would that
time might find a coffin and a grave at
the public house.

There is a much more economical
method than the Club in "Salvage" of
"Sherlock" and several of others in town.
My share in this business is, I believe,
in "Salvage" and "Sherlock".

What method of "Salvage" would
a little better answer to our city. You a
little number of the same and some medical
"Salvage" it is better to be done. I
am certain of one thing (D. J. Greenfield
of "Merrimack" has lately written a "Salvage"
for "Salvage" in which he strongly recommends
the method of "Salvage" and says it is better than
it is "Salvage" method.

There is a talent in the town
which is the talent of "Salvage" and "Sherlock"
and it is better to be done by the "Salvage"

Some silent, but most generally known
at the little one we had the pleasure to
listen to when we were with them.
The music is so generally known that it is
of course... well known. Some have seen it
the subject of conversation. The first time we
have seen nearly all the same persons
because the same is the same.

When the Heaven is truly so
brighten the people here it was to be expected.
It had been said that very large class of
the people must be given - Indeed if any one
of that sort may be given without, we
are made. But it is not possible to
have it to be otherwise with the same one
and will only be for the same.

A. Fisher, New York.

The first of these
 was the discovery
 of the fact that
 the earth is not
 a perfect sphere
 but is flattened at
 the poles and
 bulged out at the
 equator. This was
 discovered by the
 measurements of
 the French Academy
 of Sciences in the
 18th century. The
 discovery was made
 by measuring the
 length of a degree
 of latitude at
 different places on
 the earth. It was
 found that the
 length of a degree
 was greater at the
 poles than at the
 equator. This
 showed that the
 earth was not a
 perfect sphere but
 was flattened at
 the poles and
 bulged out at the
 equator. This
 discovery was
 one of the first
 steps in the
 development of
 modern geology.

requiring more watchful attendance. The Physician
should be present at the giving of the
Emetic, watch their operation and assist the Stomach
in clearing itself of its contents. We should inspect
carefully the discharged - In a word, visit his
patients as frequently as is compatible with
his other duties.

To these unfortunate creatures
the most mild and tender treatment is
necessary. Harsh language is never needed
they are generally persons who have seen
brighter days. Reduced by the reverse of
fortune and overwhelmed by the flood of
adversity, they have tried to find comfort from
the intoxicating cup - From the oblivion of
inebriation they have awakened only to find
more oppressive trials and to experience keen
anguish. A man's heart must have been
deeply wrong before from the eminence
of respectability he sinks in to an inha-
